

OLLY ROBINSON

Welcome.

I am a Front-end Web Developer who loves building websites and, occasionally, designing them. I am still fairly new to this game, with half a year's experience at an award-winning digital agency and over a year working with front-end technology.

I have developed the ability to troubleshoot, iterate and collaborate to create fantastic websites that will stand up under scrutiny.

I love working with inspiring designers who understand the web. The way people consume information, respond to stimuli and wish to be heard is always changing. I want to unlock the democratic potential of the web through clear design and accessible interfaces.

Right now I'm looking to make my next move. Why not write to me at ollythedeveloper@gmail.com

If you want to see more of my work, go to ollyrobinson.dev

Experience

May - October 2019

Front-end Developer

[Parallax](#)

Parallax are an award-winning digital agency in Leeds. During my time at the agency I worked alongside senior developers on large projects and carried out retainer work for long-standing clients.

I gained an understanding of how production websites are pitched, designed and developed. Using a tech stack built on PHP/Laravel, I worked with Blade, TailwindCSS, ES6 JS, Git and MySQL.

The best thing about working at Parallax was the supportive, collaborative culture. There were always opportunities to learn and contribute to the development workflow.

April - May 2019

Intern, Front-end Development

[Parallax](#)

July 2018 - April 2019

Online Coding Courses

[SuperHi](#)

In summer of 2018 I enrolled on an online course named Foundation HTML, CSS & JavaScript by SuperHi. I proceeded to complete 6 more of SuperHi's short courses. I learnt how to build responsive sites using build tools, SVGs and JavaScript.

Technology

HTML	I have learnt how to write semantically correct HTML that allows for maximum user accessibility.
CSS	I enjoy keeping on top of new features to imagine designs for the web.
JavaScript (ES6)	I have used ES6 to create efficient clean functions, mostly in the context of DOM manipulation.
PHP/Laravel Blade	I have used Blade, an abstraction of PHP, to create dynamic components that ensure a lean code base.
Gulp	Gulp 4 build tools write code that is minified, compiled and efficient for rapid load speeds.
Git/GitHub	I use Git as well to version control projects and GitHub Desktop or the command line to execute commands.
TailwindCSS	TailwindCSS is a utility-class approach to responsive CSS that results in lightweight CSS files.
Accessibility	I understand how to create sites for a heteronomous cohort of users.

Technology

WordPress/ACF

I have a core understanding of WordPress concepts such as The Loop and experience using Advanced Custom Fields.

Jira/Stash/Bamboo

I have used the Atlassian products Jira, Stash and Bamboo for work issue tracking, repo management and continuous deployment.

Cross Browser Testing

I have worked on sites that are tested to IE11 and learnt some of the pitfalls and workarounds involved with cross-browser compatability.

Thank you for taking the time to look at my CV. If you want to get in touch to talk about a job opening, a project or anything about my work then my contact information is below,

I'm always happy to talk.
