Olly Robinson

Welcome.

I am a Front-end Developer from Yorkshire, currently based in London. Recently I have been contracting with digital agencies to deliver outstanding websites.

My competencies lie in working within an Agile, iterative methodology to build web apps that deliver maximum user value.

I believe the key to success for users is collaboration between UX/UI and Development teams. When building a site or web application, I want to understand what user success means and how this will be measured.

Right now I'm looking to make my next move. Why not write to me at ollythedeveloper@gmail.com

If you want to see more of my work, go to ollyrobinson.dev

Experience

Front-end Developer
Catch Digital

December 2019 - March 2020

Catch are a Drum Top 100 digital agency based in Soho. I worked alongside some world class developers, building sites using Drupal CSM and BEM CSS methodology.

The highlight of Catch was the supportive, collaborative culture. There were always opportunities to learn and contribute to the development workflow.

Front-end Developer
Parallax

May - October 2019

At Parallax I gained an understanding of how production websites are pitched, designed and developed. At Parallax I worked with a stack built on PHP/Laravel, I worked with Blade, TailwindCSS and ES6 JS.

Online Coding Courses
SuperHi

Feburary - April 2019

In Febuary 2019 I enrolled on an online course named Foundation HTML, CSS & JavaScript by SuperHi. I proceeded to complete 6 more of SuperHi's short courses. These gave me a well-rounded introduction to front-end technologies.

Technology

HTML

I have learnt how to write semantically correct HTML that allows for maximum user accessibility.

CSS

I enjoy keeping on top of new features to imagine designs for the web.

JavaScript (ES6)

I have used ES6 to create efficient clean functions, mostly in the context of DOM manipulation.

TailwindCSS

TailwindCSS is a utility-class approach to responsive CSS that results in lightweight CSS files.

BEM Method

I have experience working with the BEM CSS framework. Given that consistent naming is such a common pitfall, I find BEM refreshingly straightforward.

React.js

I have recently began teaching myself the React JS framework. I am interested in its ability to handle state in large scale web apps.

Drupal

I have worked with Drupal 8 CMS to create complex content managed sites.

Twig

Alongside Drupal 8, I have experience using Twig as a PHP framework.

Git/GitHub

I have a strong grasp for Git version control and Bitbucket in commercial agencies.

Technology

Accessibility	I understand how to create sites for a heteronomous cohort of users.
WordPress/ACF	I have a core understanding of WordPress concepts and experience using Advanced Custom Fields.
Jira/Stash/Bamboo	I have used the Atlassian products Jira, Stash and Bamboo for work issue tracking, repo management and continuous deployment.
Cross Browser Testing	I have worked on sites that are tested to IE11 and learnt some of the pitfalls and workarounds involved with cross-browser compatability.
Laravel Blade	I have used Blade, a templating language based on Laravel PHP, to create dynamic components that ensure a lean code base.
Gulp	Gulp 4 build tools write code that is minified, compiled and efficient for rapid load speeds.

Thank you for taking the time to look at my CV. If you want to get in touch to talk about a job opening, a project or anything about my work then my contact information is below,

I'm always happy to talk.
